

Compassionate and expert care for every child !

Redd's Homecare Agency has the compassionate and expert care that you require for your child with special healthcare needs. We provide inpatient and outpatient management of children and young adults with chronic, complex medical, developmental and mental health conditions. Our services provides families with a wide array of in home care solutions, from nurses who are available on a regular basis, 24 hours a day, 7 days a week.

We believe every child should be able to enjoy a normal life, even though they may be diagnosed with a serious medical condition and/or be required to live on specialized equipment such as ventilators or feeding tubes.

Our children include children with Autism, Cerebral Palsy, mental retardation, developmental delays and other physical, neurological and behavioral challenges. The services are provided in the child's home and in the community. Our experienced staff goes above and beyond the status quo to ensure that they are providing an unparalleled level of quality developmental services.

We work with you, the hospital and community to create a medical home that supports your child's unique needs. Your family will find everything from sophisticated treatment and coordination of care to help with finding and accessing healthcare, financial resources and community services and supports. Our goal is to improve quality of life while reducing the need for emergency room visits, hospital admissions, length of stay and clinic visits.
